Tutt Bryant launches its Go Green initiative to contribute towards Australia's decarbonisation journey

Australia's leading multi-franchise distributor and industrial services organisation, Tutt Bryant, announces the official launch of **Tutt Bryant Go Green** – an exciting new initiative that recognises the role that the heavy equipment industry can play in Australia's journey towards decarbonisation.

The aim of **Tutt Bryant Go Green** is to introduce innovative and sustainable products, services and solutions to the domestic market by tapping into the vast and diverse network of global partners and suppliers that has been meticulously assembled by Tutt Bryant over the years.

It is also Tutt Bryant's goal to develop home-grown solutions that are optimised to Australia's unique conditions by utilising in-house capabilities and collaborating with local enterprises. These can form part of Tutt Bryant's efforts to enhance local skills and capacity in design and engineering, advanced manufacturing and value-adding services.

Ultimately, the **Tutt Bryant Go Green** initiative seeks to increase the sustainable options that are available in Tutt Bryant's wide range of products and services, and customers can expect to benefit from:

- Tutt Bryant Equipment bringing in new machinery and equipment from existing portfolio brands that are low or zero carbon emitting, and other related products such as Battery Energy Storage Systems (BESS);
- Tutt Bryant Equipment representing new brands that are focused on green and sustainable products and services;
- Tutt Bryant Equipment collaborating with local enterprises to develop home-grown products and services, an example of which is the LiFePO₄D hybrid prototype unit;
- Tutt Bryant Heavy Lift & Shift and Tutt Bryant Hire introducing low and zero carbon emitting equipment into their respective rental fleets, such as cranes and access equipment that are fully battery electric or powered by alternate fuels such as hydrogen and ethanol;
- Tutt Bryant Heavy Lift & Shift and Tutt Bryant Hire offering the option of renewable diesel (HVO100) as a drop-in fuel for existing rental units with internal combustion engines; and
- Other future innovations that support the decarbonising of the heavy equipment industry in Australia.

To lead the initiative is newly appointed **National Business Manager – Sustainable Products and Innovation**, Mr Chris Leahy, who said that Tutt Bryant is committed to play an important role in promoting sustainability and decarbonisation in its area of influence.

“We recognise that through our three operating divisions that are focused on the sale and hire of construction machinery and equipment, Tutt Bryant is able to reach a broad spectrum of customers who currently have limited choices to lower their carbon emissions”, Mr Leahy said.

“The Tutt Bryant Go Green initiative will require a whole-of-organisation approach by Tutt Bryant to leverage the expertise from all parts of the group and collaborate with all of our stakeholders to optimise and deliver practical and cost-effective solutions that are sustainable and contribute towards decarbonising our industry.”
